

Claims 1-9 are cancelled.

10. (new) A fixture for forming unit loads to be received on two or more loading ledges, which unit loads after forming are lifted from the fixture together with the loading ledges, wherein the fixture is to receive the loading ledges and the fixture has means to adapt the positions of the loading ledges depending on the size and form of the unit loads to be formed.

11. (new) The fixture of claim 10, wherein the fixture has an approximate rectangular frame, formed of at least two parallel long struts and at least two parallel short struts at the end of the long struts.

12. (new) The fixture of claim 11, wherein a further number of intermediate, short struts are arranged between the long struts.

13. (new) The fixture of claim 11, wherein transversal bars are arranged moveable on the long struts, with the ends of each transversal bar on each long strut.

14. (new) The fixture of claim 13, wherein feet of the loading ledges are to be received in cups arranged on the fixture, at least some of which cups are arranged moveable and lockable on the transversal bars.

15. (new) The fixture of claim 14, wherein two cups are arranged on each transversal bar.

16. (new) The fixture of claim 14, wherein four transversal bars are received on the frame.

17. (new) The fixture of claim 14, wherein each movable cup has a support, having legs straddling a transversal bar and a locking screw received in an opening of one of the legs of the support.

18. (new) The fixture of claim 13, wherein each transversal bar has supports straddling the long sides of the frame and the supports have locking means to lock the position of the transversal bar.

19. (new) The fixture of claim 10, wherein the height of the frame is adjustable.
